

USER MANUAL

Once the licenses have been assigned (Marketplace purchase page → Assign Licenses button), the installation can be carried out from Business Central in Extensions → AppSource Gallery.

The screenshot shows the Business Central AppSource Gallery interface. The main window displays a list of applications under the heading 'Aplicaciones de Microsoft AppSource'. The 'Store Media' application by 'Nomadaware, S.L.' is highlighted. A hand icon indicates the selection of this application. The application details panel on the right shows the 'Store Media' application, including its description and pricing information.

Descripción

Store Media

Store Media helps Business Central users organize and manage MediaSet content in a simple and visual way.

Create personal stores, reorder images and files, copy media between your own stores or linked MediaSets, and work more comfortably with multimedia content already stored in Business Central.

Designed for everyday use, lightweight, and easy to integrate into existing Business Central environments.

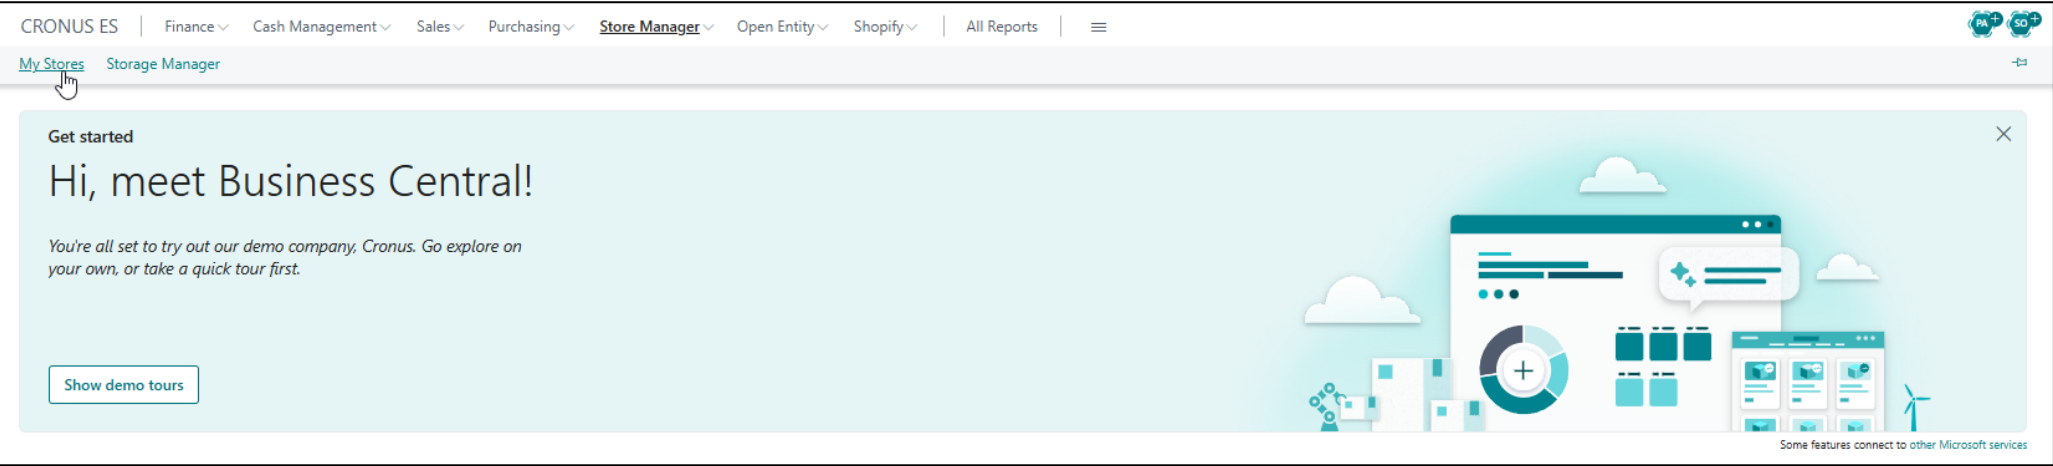

Planes

Información general de los planes

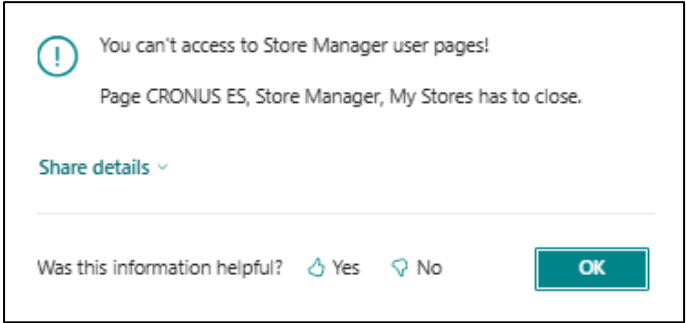

Planes	Descripción	Precio mensual	Precio anual
storemedia_standard	The Store Media Standard subscription plan allows Business Central users to organize and manage MediaSet content in a simple and visual way.	Primer mes gratis, luego EUR 0,85455 usuario/mes.	Primer mes gratis, luego EUR 8,54555 usuario/año.

Cerrar

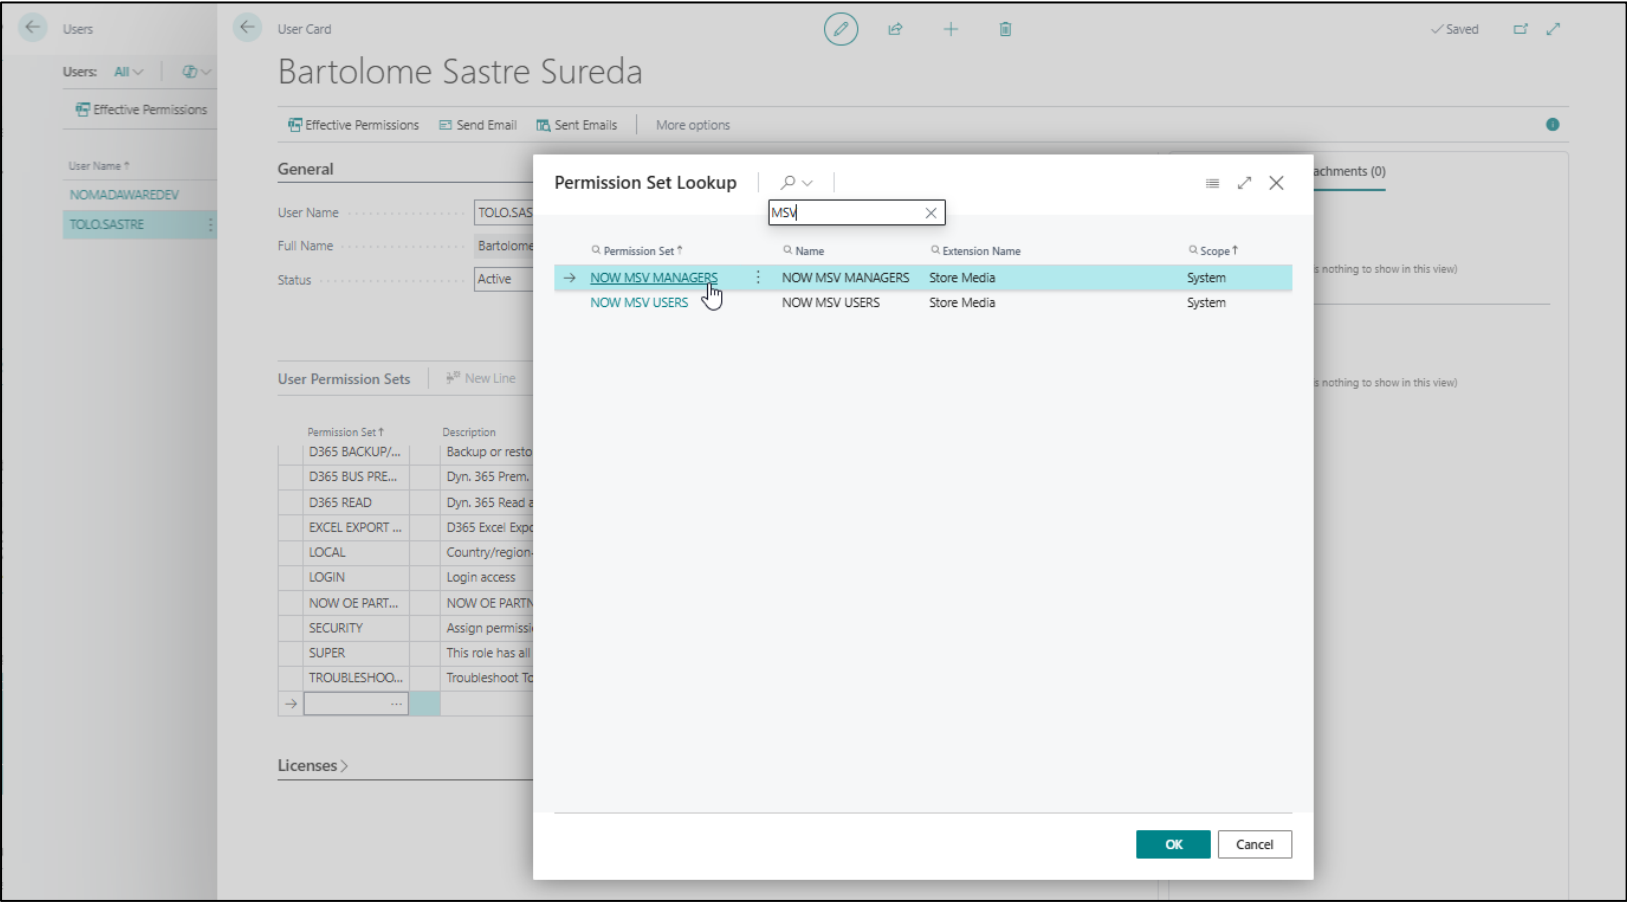

Once the installation has been completed, a new option called Store Manager will appear in Business Central, displaying two available actions: My Stores and Storage Manager.

If we click on either of them, an error message will be displayed.

We must first grant the necessary permissions to the users, including the application Manager.

NOW MSV USERS is the standard permission set for most users and only allows access to the “My Stores” page. On this page, users can create as many media stores as they want (images, Excel files, PDFs, etc.).

NOW MSV MANAGERS is the application “Administrator” permission set and allows users to manage and view other users’ stores, as well as manage Global stores (not linked to any specific user) and MediaSet-type stores.

Both the “My Stores” and “Storage Manager” actions are identical:

Media

Image

Information
Current Image No. 1
Items 14

The only difference is that the first one only manages user entries (stores).

The standard “New” and “Edit List” actions allow us to create or edit the application fields.

The “Delete” action will remove both the store entry and its content for User and Global store types. For MediaSet stores, since they are linked to a Business Central record such as Items or Item Variants, the application will ask whether the Media files linked to the record should also be deleted. If the answer is negative, only the store entry will be deleted, but NOT its content. If the deletion of the Media files is confirmed, they WILL be deleted and will disappear from the linked record.

At the moment, Microsoft treats MediaSets as if they were a single Media field. This means that when importing an image or any other document into their standard pages, the new import does not get added but instead overwrites the existing one. Respecting this limitation, our Store Media MediaSet store type allows additional Media files to be stored even though they are not accessible from the standard Business Central pages. For example, using the “Set as First” action, any stored Media can be placed as the primary one, effectively “replacing” the currently visible Media.

The “Import” action allows a Media file to be added to the store by dragging it into the “Select File” window.

Using the “Get From Record(s)” action for “Global” or “User” store types, we can browse tables that contain Media or MediaSet fields (we can filter by type). After confirming which table we want to work with, we can select the desired records. Once the selection is validated, all the Media files from those records will be imported into our store.

Download

Information
Current Image No. 2
Items 4

In the page FactBox, we can see the Information section, which indicates the order of the Media file we have navigated to and the total number of items contained in the store. In addition, the Download action is available at the top when clicking on the FactBox title (Media).

The “Stored Items” action opens a new page displaying all the Media files stored so far.

In Stored Items, the “Delete” action simply removes the stored Media file. If we want to delete several items, we must first switch the page to “List” mode and make our selection.

The “Set as First”, “Move Previous”, “Move Next”, and “Set as Last” actions reposition the selected Media file to the location (order) corresponding to the chosen action (first, previous, next, or last).

The “Copy To Store” action allows us to copy the selected records. If the page is displayed in “Tall Tiles” or “Tiles” mode, only the record currently selected will be copied. To copy multiple Media files, we must switch the page to “List” mode, make the desired selection, and then choose the destination store.

Storage Manager Columns (Fields):

Code: enter a code of your choice.

Source Type: type of store (Global, MediaSet, User).

Description: descriptive text indicating the nature of the store.

Display (Users) Code: this is the field that a user enters in “My Stores”. It causes the User ID to be added as a prefix to the Code field. Its main purpose is to differentiate between stores belonging to different users that may share the same store name, preventing conflicts. If we enter this code directly from Storage Manager, the system will ask whether we want to rename the main Code field.

Order: allows us to sort our stores using a numeric code.

Source Table No., Source Table Name, Source Field No., Source Field Name, and Source Record ID: these are non-editable fields related to the acquired record, as explained previously. For MediaSet types, they indicate the linked record, while for Global and User types, they refer to the application’s own store record.

User Security ID and User ID are automatically populated when a regular user creates a store in My Stores. They can also be modified from Storage Manager.

Folder: allows us to create “folders” in order to filter or organize records (stores). If a regular user creates a folder from ‘My Stores’ page, the main folder code will be prefixed with the User ID to prevent conflicts with other users’ stores that may have the same code, although this prefix will not be visible from the user’s perspective.

WHAT'S NEW IN VERSION 1.0.0.2

Access to Store Manager has been redesigned and integrated into the My Stores page.
If the user has Manager permissions, the Store Manager action will be available from the page's action menu.

Mime Signatures (Blobs) contains data used for the direct conversion of BLOB fields into Media fields (for example, a Media field within a Store). The product installation already includes the most common signatures required for this type of conversion. Therefore, unless you plan to import (Get from Records) legacy BLOB fields from older tables or customizations, this feature will generally require little or no maintenance.

Mime Signatures (Blob Conversions)

The Tenant Media action opens a page displaying all records from the Tenant Media table. Selecting the **Show Orphan Media** action will display only orphan media records (media items that are not referenced by any record). Selecting **Show All Media** will restore the default view and display all records in the Tenant Media table.

Media

2 orphan media item(s) deleted. 0 item(s) skipped.

Aceptar

The **Delete ALL Orphan Tenant Media** action performs the same deletion process, but without requiring any prior selection. All orphan media records currently present in the Tenant Media table will be identified and deleted automatically.

Orphan media scan completed.

Total found: 52

Deleted: 52

Skipped: 0

OK

Finally, the **Copy to Store** action allows the selected media items to be copied to the desired Store.

The **Find References** action displays a page containing information about the record or records associated with the selected media item, helping administrators identify where the media is being used within the system.

Media

If the associated record has an available Card page, users will be able to navigate directly to it from the reference list.

WARNING ABOUT MODIFYING OR DELETING A MEDIASET FROM BUSINESS CENTRAL

If you modify a MediaSet field (using Take, Import, or Delete) from a Business Central record card, such as an Item Card, Business Central will completely replace and remove the previous MediaSet.

If you have created a MediaSet Store linked to that record and have added additional media items to it, all information contained in that Store may be lost after the MediaSet is modified.

To prevent data loss, it is recommended to create a backup by copying the media content to another User Store or Global Store before modifying or deleting the original MediaSet.
