

## USER MANUAL

Once the licenses have been assigned (Marketplace purchase page → Assign Licenses button), the installation can be carried out from Business Central in Extensions → AppSource Gallery.

The screenshot displays the Business Central AppSource Gallery interface. The main window shows a list of installed extensions, with 'Store Media' selected. A modal window titled 'Información general de la aplicación - Store Media' is open, providing details about the application.

Nombre para mostrar...: Nomadaware, S.L.

**Descripción**

**Store Media**

Store Media helps Business Central users organize and manage MediaSet content in a simple and visual way.

Create personal stores, reorder images and files, copy media between your own stores or linked MediaSets, and work more comfortably with multimedia content already stored in Business Central.

Designed for everyday use, lightweight, and easy to integrate into existing Business Central environments.

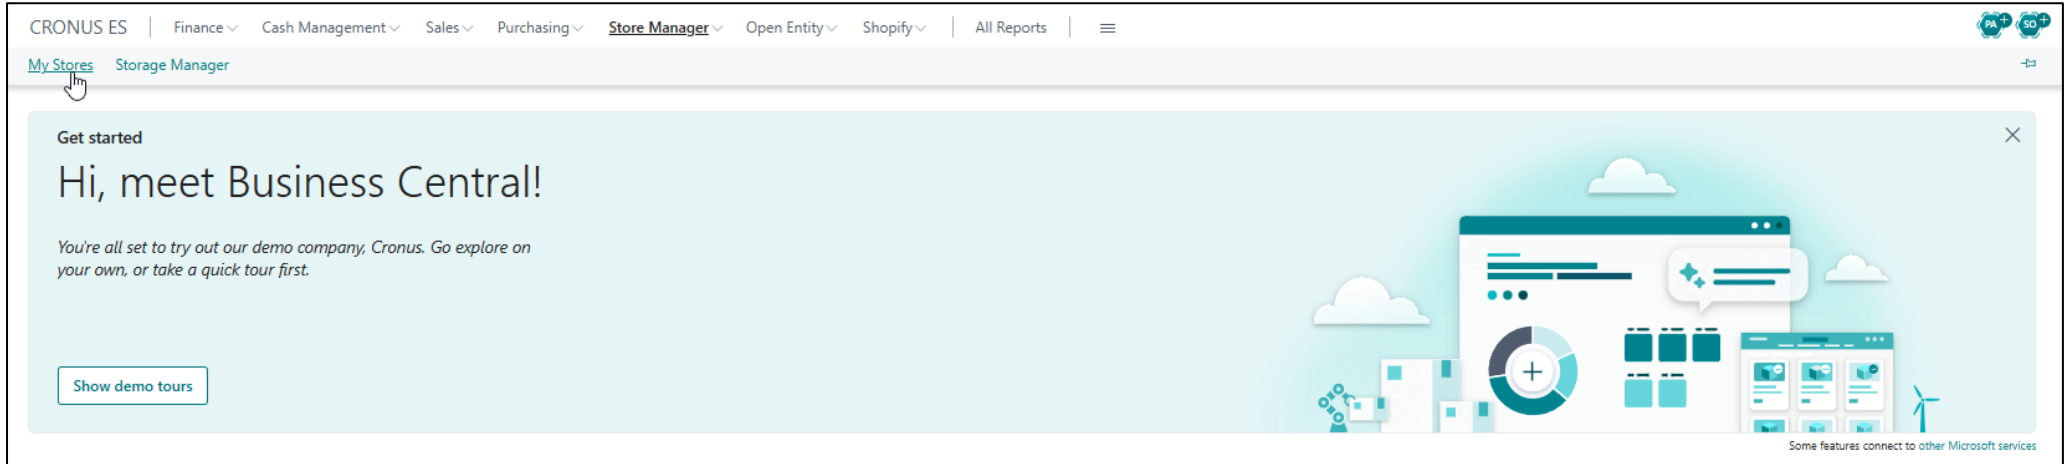

**Planes**

Información general de los planes

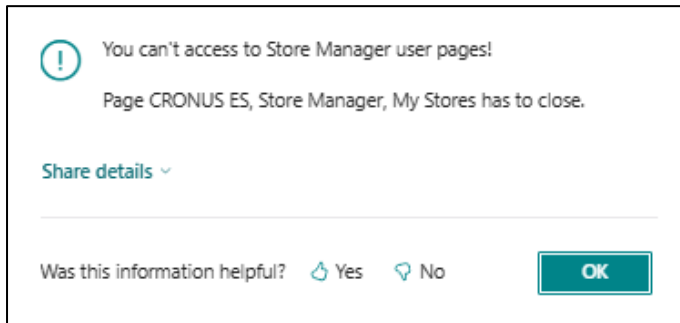

Planes	Descripción	Precio mensual	Precio anual
storemedia_standard	The Store Media Standard subscription plan allows Business Central users to organize and manage MediaSet content in a simple and visual way.  Users can create personal stores, visually manage images and files, reorder media items, and copy content between stores and linked MediaSets inside Business Central.  The app integrates with standard Business Central MediaSet functionality and helps users work more comfortably with multimedia content already stored in the system.	Primer mes gratis, luego EUR 0,85455 usuario/mes.	Primer mes gratis, luego EUR 8,54555 usuario/año.

[Cerrar](#)

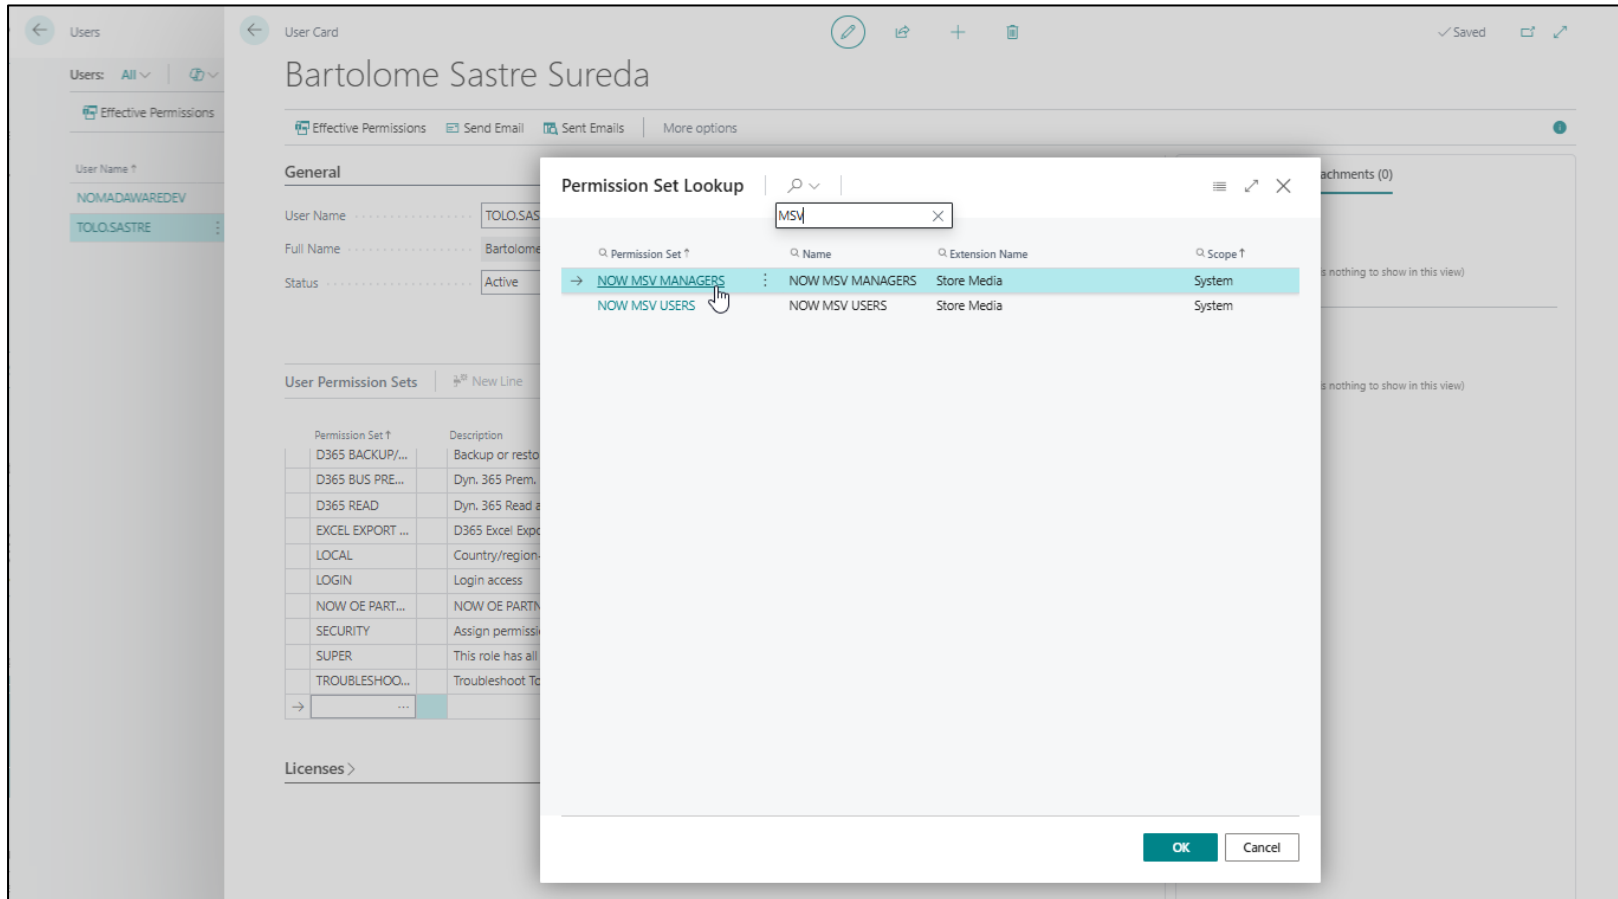

Once the installation has been completed, a new option called Store Manager will appear in Business Central, displaying two available actions: My Stores and Storage Manager.

If we click on either of them, an error message will be displayed.

We must first grant the necessary permissions to the users, including the application Manager.

NOW MSV USERS is the standard permission set for most users and only allows access to the “My Stores” page. On this page, users can create as many media stores as they want (images, Excel files, PDFs, etc.).

NOW MSV MANAGERS is the application “Administrator” permission set and allows users to manage and view other users’ stores, as well as manage Global stores (not linked to any specific user) and MediaSet-type stores.

Both the “My Stores” and “Storage Manager” actions are identical:

Information  
Current Image No. 1  
Items 14

The only difference is that the first one only manages user entries (stores).

The standard “New” and “Edit List” actions allow us to create or edit the application fields.

The “Delete” action will remove both the store entry and its content for User and Global store types. For MediaSet stores, since they are linked to a Business Central record such as Items or Item Variants, the application will ask whether the Media files linked to the record should also be deleted. If the answer is negative, only the store entry will be deleted, but NOT its content. If the deletion of the Media files is confirmed, they WILL be deleted and will disappear from the linked record.

At the moment, Microsoft treats MediaSets as if they were a single Media field. This means that when importing an image or any other document into their standard pages, the new import does not get added but instead overwrites the existing one. Respecting this limitation, our Store Media MediaSet store type allows additional Media files to be stored even though they are not accessible from the standard Business Central pages. For example, using the “Set as First” action, any stored Media can be placed as the primary one, effectively “replacing” the currently visible Media.

The “Import” action allows a Media file to be added to the store by dragging it into the “Select File” window.

The screenshot displays the Microsoft Dynamics 365 Store Manager interface. At the top, there is a navigation bar with tabs for Finance, Cash Management, Sales, Purchasing, Shopify, Store Manager, and Open Entity. Below this is a toolbar with various actions: All, New, Edit List, Delete, Import, Stored Items, Get from Record(s), Go to Record, First, Previous, Next, Last, Refresh, and More options. The main area contains a table with the following columns: Code, Source Type, Description, Display(users) Code, Order 1, Source Table No., Source Table Name, Source Field No., Source Field Name, Source Record ID, User Security ID, User ID, Folder, and Images. The table lists various store entries, including MediaSet stores like EMPLOYEES, HODGEPODGE, ITEMS, ITEMS2, ITEMS3, and NEWS, as well as User stores like NOMADAWAREDOCUMENTS, OTHER, RECEPTIONSLIST, SNOWBOARD1, TOLO.SASTRE-MYFIRSTST..., TOLO.SASTRE-BC, TOLO.SASTRE-SELF, TOLO.SASTRE-INVOICES..., TESTGLOBAL, TOLO.SASTRE-ITEMS3BAK, TOLO.SASTRE-EMPLOYEES, and TOLO.SASTRE-INVOICES. An 'Import' dialog box is overlaid on the table, titled 'Select file', with a dashed box indicating where to drop a file and a 'Cancel' button.

Using the “Get From Record(s)” action for “Global” or “User” store types, we can browse tables that contain Media or MediaSet fields (we can filter by type). After confirming which table we want to work with, we can select the desired records. Once the selection is validated, all the Media files from those records will be imported into our store.

Items 4

In the page FactBox, we can see the Information section, which indicates the order of the Media file we have navigated to and the total number of items contained in the store. In addition, the Download action is available at the top when clicking on the FactBox title (Media).

The “Stored Items” action opens a new page displaying all the Media files stored so far.

In Stored Items, the “Delete” action simply removes the stored Media file. If we want to delete several items, we must first switch the page to “List” mode and make our selection.

The "Set as First", "Move Previous", "Move Next", and "Set as Last" actions reposition the selected Media file to the location (order) corresponding to the chosen action (first, previous, next, or last).

The “Copy To Store” action allows us to copy the selected records. If the page is displayed in “Tall Tiles” or “Tiles” mode, only the record currently selected will be copied. To copy multiple Media files, we must switch the page to “List” mode, make the desired selection, and then choose the destination store.

## Storage Manager Columns (Fields):

Code: enter a code of your choice.

Source Type: type of store (Global, MediaSet, User).

Description: descriptive text indicating the nature of the store.

Display (Users) Code: this is the field that a user enters in "My Stores". It causes the User ID to be added as a prefix to the Code field. Its main purpose is to differentiate between stores belonging to different users that may share the same store name, preventing conflicts. If we enter this code directly from Storage Manager, the system will ask whether we want to rename the main Code field.

Order: allows us to sort our stores using a numeric code.

Source Table No., Source Table Name, Source Field No., Source Field Name, and Source Record ID: these are non-editable fields related to the acquired record, as explained previously. For MediaSet types, they indicate the linked record, while for Global and User types, they refer to the application's own store record.

User Security ID and User ID are automatically populated when a regular user creates a store in My Stores. They can also be modified from Storage Manager.

Folder: allows us to create "folders" in order to filter or organize records (stores). If a regular user creates a folder from 'My Stores' page, the main folder code will be prefixed with the User ID to prevent conflicts with other users' stores that may have the same code, although this prefix will not be visible from the user's perspective.
